ChatGPT 4o ⌄

our website is online tailoring service website where customer users can send their materials for a particular outfit type through courier and we stitch the material they sent as per the design they had chosen which is sent by photo uploading . we provide offers for services provided and each outfit type is with different basic price range and each outfit type can have it sub categories for example if user selected outfit type Blouse the material they had sent will be stitched as blouse . So write filters and sort options according to the above scenario if I had missed anything please fill me in with innovative idea options. And give me ideas to improve the features of the website

Based on your scenario of an online tailoring service, here's a detailed breakdown of the filters and sort options you can implement on your website, along with some innovative ideas to enhance the features:

Filters

1. **Outfit Type**:
   - Blouse
   - Dress
   - Pants
   - Skirt
   - Suit
   - Traditional Wear
   - Others

2. **Subcategories** (based on selected outfit type):
   - For Blouse: Long Sleeve, Short Sleeve, Sleeveless, Off-shoulder, etc.
   - For Dress: Casual, Formal, Party, Maxi, Midi, Mini, etc.
